Cabot's Weathering Grays produce in a few months the beautiful silver sheen of old shingles, ordinarily wrought by years of exposure to wind and weather.

The Stains prevent decay, producing a temporary first appearance which changes to permanent silvery weathering as soon as the natural red coloring of the wood has been washed out by the elements.

Weatherbeaten effects are produced by the weathering Browns 141 and 144.

Creosote Shingle Stains were invented by Samuel Cabot and patented in 1884. They were the first shingle stains on the market.

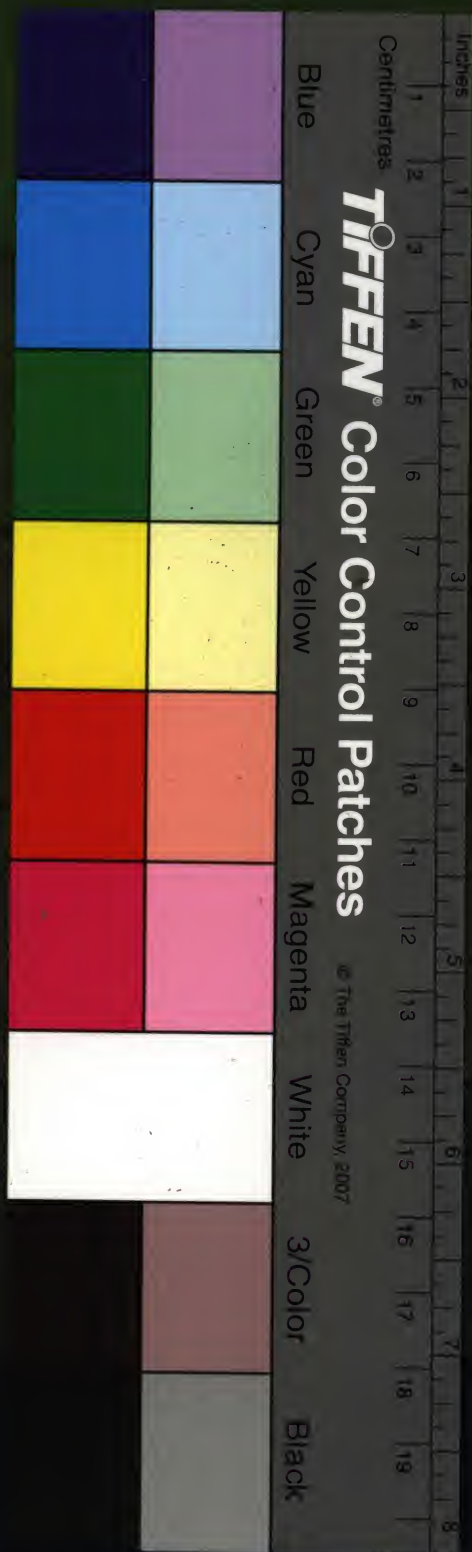

They are made from pure mineral pigments by the patented Cabot Collapaking Process, colloidally reduced to sub-microscopic fineness in fixative oils and dispersed in genuine Cabot's Creosote manufactured in our factory under skilled laboratory control for exclusive use in this product.

All trade marks Regd. U. S. Pat. Off.

Cabot's Creosote Stained Shingles are manufactured in our own plants, and distributed through lumber dealers. We use only the highest grade red cedar shingles. Each Shingle is thoroughly impregnated with the stain, and the high creosote content gives them longer life.

Cabor's Creosote Stained Shingles are manufactured in our own plants, and distributed through lumber dealers. We use only the highest grade red cedar shingles. Each Shingle is thoroughly impregnated with the stain, and the high creosote content gives them longer life.

Cabot's Collophakes (colloidal paints) include DOUBLE-WHITE, Old Virginia White, Gloss Collophakes, Pastel Collophakes, and Stucco and Brick Stains. We also manufacture Clear Brick and Cement Waterproofing, Conservo Wood Preservative, Flexiblac Protective Paint, All-Purpose Varnish, Japan Dryer, Lampblack, and Heat-Insulating and Sound-Deadening Quilt. Color cards and literature will be mailed on request.
